Subject: Toro/Unique Mobility, Inc. Hybrid Greensmower

Dear Mr. Miller,

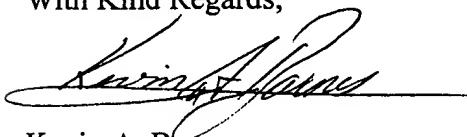

Unique Mobility, Inc. specializes in the development of permanent magnet motors and their associated controls for electric and hybrid/electric vehicles. As you are aware, during the late 1980's, Unique Mobility, Inc. and Toro jointly developed a hybrid electric greensmower. This mower replaced the hydraulic wheel and reel drives with electric motors. The vehicle incorporated a small battery pack that was charged by a gas engine driving a Unique Mobility permanent magnet generator. By the way, one of our engineers found one of the wheel hub drive prototypes in his office.

Further to our telephone discussions and your fax dated September 28, 1998, I have enclosed the video tapes we discussed. The tape titled "Summer 1989" is the promotional piece that showcases many of Unique's engineering accomplishments up to that point in time. The other is raw footage that was taken in preparation for compiling that tape. I will also e-mail you copies of the greensmower picture that you mentioned. Also, I have a substantial archive of slides showing the vehicle in various states of assembly.

As the Manager of Product Sales, I am involved with company presentation materials and marketing and how they are used. Unique uses promotional tapes such as this to develop relationships with potential clients. This tape was used in our company presentations and at various conferences and seminars we attended.

Let me know if I can be of further assistance.

With Kind Regards,

Kevin A. Barnes  
Manager, Product Sales  
Unique Mobility, Inc.
